

The Plan to Keep Building

How to add the next case

1. Capture the three beats (15 min)

- **The problem:** What needed to happen? Why was the existing situation insufficient?
- **What I did and decided:** What did I build, investigate, change, or decide? Why?
- **What came of it:** What actually worked, shipped, changed, or was learned? Include limitations where relevant.

2. Gather proof (5 min)

- Pick **1–2 assets** that support the case.
- Add the repo/demo link if useful.
- Only use evidence that actually exists.

3. Add it to the existing layout (5 min)

- Duplicate the existing case-study structure.
- Keep the same three-beat order.
- Place the new case according to **strength of evidence**, not chronology. This matches the existing portfolio plan.

4. Final proof check (5 min)

Ask:

- Does this prove something about how I build useful working systems?
- Is my personal contribution obvious?
- Can I point to evidence for the claims?
- Have I accidentally made the project sound more impressive than the evidence supports?

That keeps the process deliberately small. You're not redesigning the portfolio every time. You're feeding a new piece of evidence into the system.

The named next piece

The following pieces are already complete

Telco BI & Prediction Project (Tech4Dev Mentorship)

- Github repo
- Fork and deploy on streamlit (easy win) OR use dashboard screenshots

Evidence of the reminder set

The screenshot displays the ChatGPT web interface. On the left, a sidebar lists various project assets under the heading 'Pinned', including 'Refine SEO Description', 'Professional Portrait Edit', 'Portfolio Stack Options', and 'Craft portfolio claim map'. The main chat area shows a conversation with a 'Sitemap - proof statement' project. The chat history includes a 'Next case' section for the 'Telco BI Project' and a 'Reminder' section stating: 'I set a reminder for tomorrow, August 31, to add the Telco BI case using the three-beat structure and explicitly frame only your actual contributions.' Below the reminder, a blue button indicates 'Thu 12:00 pm · Add Telco BI case'. A message at the bottom of the chat area states: 'Chat paused until usage resets at 7:03 AM. You've reached the limit for chats that include files or images. Start a new text-only chat or upgrade to continue now.' To the right of the chat area, a 'Add Telco BI case' panel is visible, showing a 'PROMPT' field with the text: 'Add the Telco BI group project as the next portfolio case study. Frame only my actual contributions and use the existing three-beat case structure: The problem, What I did and decided, What came of it.' Below the prompt field, a 'FREQUENCY' section shows 'Date' set to 'Sep 3' and 'Time' set to '12:00 PM'. A 'Next run' section shows 'Sep 3 at 12:00 PM'.
