Sitemap Pressure-Test Prompt

Full prompt: This is my proof statement:

I build applied AI systems that turn ambiguous problems into practical capabilities. I am proving this to a founder or technical leader at an early-stage startup building new AI products, so they can see that I can move from understanding a problem to designing and delivering a working AI system. The single action I want them to take is to give me a trial project or build sprint where I can prove my ability through delivery rather than credentials.

This is my sitemap:

- * Home
 - * States the proof immediately.
 - * Hero with your claim.
 - * A few selected projects as evidence.
 - * CTA: "Let's build something."
- * Projects
 - * The actual proof.
 - * Case studies focused on the business problem, engineering decisions, trade-offs, and outcome.
 - * Not a gallery of notebooks.
- * About
 - * Explains how you think, not your life story.
 - * Your philosophy of building useful systems rather than chasing metrics.
 - * Why you naturally fit startups.
- * Resume
 - * For people who already believe you and want the formal record.
- * Contact
 - * Makes taking the next step frictionless.

Does this sitemap walk my one person from landing, to believing me, to taking my one action, and does it actually prove my claim? Tell me which pages earn their place, which are wasted, and what is missing. Be specific, not encouraging.

Sitemap Pressure-Test Output (detailed final sitemap and supporting projects)

Portfolio: Final Sitemap

Proof statement: I build applied AI systems that turn ambiguous problems into practical capabilities. I am proving this to a founder or technical leader at an early-stage startup building new AI products, so they can see that I can move from understanding a problem to designing and delivering a working AI system. The single action I want them to take is to give me a trial project or build sprint where I can prove my ability through delivery rather than credentials.

Final Sitemap

Home

- States the claim once, plainly. No hedging, no list of skills.
- Evidence shown: **Agentic BI Builder + Financial Risk Monitor only** — the two full ambiguity-to-system arcs. Not four, not five. Home's job is to make the claim credible with minimum evidence, not preview full range.
- CTA is specific, not vague: something close to *"I'm looking for a paid trial project or short build sprint — a real problem, delivered in [timeframe], so you can evaluate me on working software instead of a resume."* A named, small, low-commitment ask is harder to ignore than "let's build something."

Projects

Ordered by how directly each supports the claim:

1. **Agentic BI Builder** — flagship, full ambiguity→system arc
2. **Financial Risk Monitor** — flagship, full ambiguity→system arc
3. **SolarSense** — individual technical leadership, ambiguity resolved through personal architecture/data/modeling decisions
4. **StudyGapAI** — full-stack product ownership, insight → shipped user-facing system
5. **Alzheimer's Disease Classification** — supporting evidence; judgment at the model-selection layer, not the systems layer. Placed last and framed at the size it actually earns — not oversold as a headline judgment story.

About

- How you think, not your life story.
- Philosophy of building useful systems over chasing metrics — can reference the *instinct* behind the Alzheimer's project (reject the metric that looks best on the surface) without repeating the full case study.
- Why you fit startups — every claim here must trace back to something already visible in Projects. Don't introduce anything new here.

Resume

- For people who already believe you and want the formal record. Unchanged, low-risk, correctly deprioritized.

Contact

- Restates the specific trial-project ask from Home.
- One click to act on — email, form, or calendar link, whichever is lowest friction.
